SIGNS of Mental Illness

Diagnosing mental illness isn't a straightforward science. It can't be tested the same as testing for blood sugar levels for diabetes. Each condition has its own set of unique symptoms, though symptoms often overlap. Common signs and/or symptoms may include:

- Feeling very sad or withdrawn for more than two weeks
- Trying to hurt or end one's life or making plans to do
- Severe, out- of -control, risk taking behavior that causes harm to self or others
- Sudden overwhelming fear for no reason, sometimes with a racing heart, physical discomfort or difficulty breathing
- Significant weight loss or gain

Source: NAMI National Alliance on Mental Illness

- Excessive use of alcohol or drugs
- Drastic changes in mood, behavior, personality or sleeping habits
- Extreme difficulty concentrating or staying
- Intense worries or fears that get in the way of daily activities
- Seeing, hearing or believing things that are not real *certain cultures may not interpret hearing voices as unusual, various cultures may interpret this as part of their culture.
